

# PLANT TREES WITH IMPACT IN EUROPE

## RESTORING NATURE IN EUROPE

Trees are vital and they need our unconditional care and protection.

They give us oxygen, store carbon, stabilise the soil and they provide habitat for numerous species of fauna and flora. Also, trees prevent flooding and erosion and help fill the soil with nutrients needed for agriculture.

Together with our sister company Go Forest, we want to restore nature by planting the right kind of trees in environments where they have the most positive effects on biodiversity, carbon storage, employment, livelihood, and local economy.

## LET'S PLAN(T) THE FUTURE

Throughout the years, European forests have been harmed by many things such as wind, insects, animal browsing, and forest fires. Recent observations suggest that these things are getting more severe than before: more extreme droughts and heat waves, more extensive bark beetle outbreaks, and a wider occurrence of forest fires. Reforesting Europe with the right trees in the right places can counter these difficulties.

Go Forest plants in Belgium, Ireland, Portugal, Spain, France, Czech Republic, United Kingdom, and Romania. All projects, with different main goals.

## ACT GLOCAL FOR A GREEN FUTURE

Give back in line with your travel impact by acting Glocal and combining Global & Local climate actions. Support a certified CO<sub>2</sub>-reduction or -sequestration project to reduce the CO<sub>2</sub> emissions of your travel and go beyond offset by also planting the right combination of tree species in the areas with the biggest impact on the climate and on the environment.
